

Hybrid Robot World Model with RigidFormer Object Dynamics

State-space Franka prediction is coupled with point-cloud object prediction for long-horizon imaginary rollout.

A. Offline hybrid learning

Paired state HDF5 and mesh/FK point-cloud HDF5, aligned by episode name.

Training RF gripper context: GT mesh/FK. Online rollout gripper context: predicted_fk from robot q .

B. Online imaginary rollout

At deployment, object point clouds come from multi-view RGB-D; gripper point clouds come from FK.
